PROFESSIONAL SUMMARY

Dedicated and detail-oriented Computer Science student with experience in project support, data analysis, and software development. Proficient in developing automated solutions and utilizing technical skills in SQL, Python, and DevOps tools to enhance project efficiency. Seeking to leverage these skills in a dynamic and growth-oriented environment.

SKILLS

Programming Languages: JavaScript, HTML/CSS, Python, Java, C, YAML

Database & Tools: SQL, Git, GitHub, Oracle, IBM CloudPak, Jupyter Notebook, Pandas, Numpy, Axios library, Boto3

Frameworks & Platforms: PowerBI, Puppeteer, Bootstrap, Android Studio, Node.js, Azure, AWS, Microsoft Office (Excel, VBA), Visual Studio, SharePoint, DAX, OutSystems, UX/UI, MySQL, Terraform, AWS CLI, Bitbucket, CI/CD Pipelines, REST API, Planview

Additional Tools: Excel (Advanced), VBA for automation, Dashboard development, Report automation, Project management, Resource planning

EDUCATION

Bachelor's Degree in Computer Science, York University

September 2020 - April 2025

GPA: 3.3/4.0

WORK EXPERIENCE

Treasury Board Secretariat - Project Support Analyst

September 2024 - December 2024

- Provided **project support** by analyzing Planview reports using SQL, identifying cost overruns, and optimizing budget allocations, resulting in significant project cost reductions.
- Initiated and led the development of a **resource planning dashboard**, boosting resource allocation efficiency by 40%.
- Utilized **Excel** and **VBA** to analyze 15+ automated and manual quarterly reports, identifying discrepancies, reducing report generation time, and presenting findings to project managers.

Definity Financial - DevOps Engineer

May 2023 - December 2023

- Developed a Node.js script utilizing the Axios library and **Bitbucket REST API** to efficiently retrieve comprehensive data on projects, repositories, groups, and their associated users within the Bitbucket workspace.
- Implemented a repository access auditing script in Bitbucket, leveraging the power of **Nodemailer** to promptly notify stakeholders via email if any repositories are found to be publicly accessible, ensuring heightened security measures.
- Orchestrated the setup of an automated **pipeline** in Bitbucket, utilizing YAML configuration, to schedule and execute the repository access auditing script on an hourly basis, streamlining the monitoring and enforcement of access controls.

Treasury Board Secretariat - Junior Programmer

September 2022 - December 2022

- Developed and implemented a robust search engine for Objections and Appeal cases utilizing **OutSystems** and **SQL**, ensuring efficient retrieval and analysis of critical information.
- Demonstrated expertise in software maintenance, taking responsibility for maintaining and optimizing the codebase. Acquired a deep understanding of the software internals and underlying systems.
- Leveraged advanced **Power BI** capabilities, including DAX, to create insightful reports. Collaborated with SQL Server to extract and manipulate data, enabling **data-driven decision-making** and actionable insights.

Ministry of Health - Application Developer

January 2022 - April 2022

Ministry of Health - Application Developer

Jan. 2022 - Apr. 2022

Toronto, ON Developed and delivered a robust **Python script** using Pandas, Jupyter, and Numpy to read, filter, and store data in an Oracle database, resulting in more efficient data processing and analysis. Enhanced script reliability by implementing comprehensive **error handling techniques**, ensuring smooth execution and effective error management in backup processes. Utilized Python libraries like missingno and seaborn to create a **missingness map**, providing visual insights into data gaps and improving data exploration and analysis capabilities.

INDEPENDENT SOFTWARE PROJECTS

- **Student Database Application - Python (OOP)**

September 2022

itemize

- Developed an application to enroll students in specific courses, allowing the user to enter the name, year, and student number for each student, including an enrollment cost calculation.

PS5 Script - JavaScript, Puppeteer, Web Scraping

November 2020

itemizeCreated a script for Walmart, EBGames, TheSource, and BestBuy that refreshes the page to check item stock status, sounds an alarm, and sends an email when in stock.

Weather App - OpenWeather API, JavaScript, HTML/CSS

August 2020

itemizeDeveloped an app that generates weather data based on the user's inputted location.
